

# Anywave Communication Technologies Inc.

EMC TEST REPORT FOR

**600W V3 ATSC Transmitter System**  
**Model: TRN-VIII-600-C**  
**(See Equipment Under Test for details)**

Tested to The Following Standards:

**FCC Part 74 Subpart G**

Report No.: 102510-12

Date of issue: June 18, 2019

Test Certificate # 803.01

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

This report contains a total of 43 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc.

## ADMINISTRATIVE INFORMATION

### Test Report Information

**REPORT PREPARED FOR:**

Anywave Communication Technologies Inc.  
300 Knightsbridge Parkway, Suite 150  
Lincolnshire IL, 60069

**Representative:**

Erin Littell - F-Squared Labs  
Ted Karam - Anywave Communication Technologies,  
Inc.  
Customer Reference Number: 4530

**REPORT PREPARED BY:**

Terri Rayle  
CKC Laboratories, Inc.  
5046 Sierra Pines Drive  
Mariposa, CA 95338

Project Number: 102510

**DATE OF EQUIPMENT RECEIPT:**

May 28, 2019

**DATE(S) OF TESTING:**

May 28-29, 2019

### Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the equipment provided by the client, tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

A handwritten signature in black ink that reads "Steve Behm". The signature is written in a cursive style with a horizontal line underneath.

**Steve Behm**  
**Director of Quality Assurance & Engineering Services**  
**CKC Laboratories, Inc.**

## Test Facility Information

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

TEST LOCATION(S):  
CKC Laboratories, Inc.  
110 Olinda Place  
Brea, CA 92823

## Software Versions

CKC Laboratories Proprietary Software	Version
EMITest Emissions	5.03.12
EMITest Immunity	5.03.10

## Site Registration & Accreditation Information

Location	*NIST CB #	FCC	Japan
Canyon Park, Bothell, WA	US0081	US1022	A-0136
Brea, CA	US0060	US1025	A-0136
Fremont, CA	US0082	US1023	A-0136
Mariposa, CA	US0103	US1024	A-0136

\*CKC's list of NIST designated countries can be found at: <https://standards.gov/cabs/designations.html>

## SUMMARY OF RESULTS

### Standard / Specification: FCC Part(s) 2 /

Test Procedure	Description	Modifications*	Results
74.735(b)(1)	Power Limitations	NA	Pass
74.794(a)(2)(ii)	Occupied Bandwidth / Stringent Mask	NA	Pass
74.794(b)(1)	Radio Navigation Satellite Service Bands (GPS)	NA	NA1
74.794(a)(2)(ii)	Spurious Emissions at Antenna Terminal	NA	Pass
74.794(a)(2)(ii)	Field Strength of Spurious Radiation	Mod. #1	Pass
74.761(a)/74.761(b)	Frequency Tolerance – Voltage	NA	Pass
74.761(a)/74.761(b)	Frequency Tolerance –Temperature	NA	Pass

NA = Not Applicable

NA1 = Not applicable because the EUT does not operate on TV channels 22-24 (518-536 MHz), 32-36 (578-608 MHz), 38 (614-620 MHz), or 65-69 (776-806 MHz)

#### ISO/IEC 17025 Decision Rule

The declaration of pass or fail herein is based upon assessment to the specification(s) listed above, including where applicable, assessment of measurement uncertainties. For performance related tests, equipment was monitored for specified criteria identified in that section of testing.

## Modifications During Testing

This list is a summary of the modifications made to the equipment during testing.

#### Summary of Conditions

Modification #1: Grounded Ethernet connector shield on the PA and controller to chassis with copper tape.

**Modifications listed above must be incorporated into all production units.**

## Conditions During Testing

This list is a summary of the conditions noted to the equipment during testing.

#### Summary of Conditions

None

## EQUIPMENT UNDER TEST (EUT)

During testing, numerous configurations may have been utilized. The configurations listed below support compliance to the standard(s) listed in the Summary of Results section.

### Configuration 1

#### *Equipment Tested:*

Device	Manufacturer	Model #	S/N
5X+ Exciter	Anywave Communication Technologies, Inc	EXC-5X+c	1812144035667
700W 6-pole VHF Band III CH10(192-198MHz) BPF	Comtech	A-CL6X60B-A006	1917-203952
Controller Module	Anywave Communication Technologies, Inc	CTL-U-C	1903000010125519
600W VHF Band III PA - ATSC	Anywave Communication Technologies, Inc	AMP-4-VIII-M-C	1903070010182042

#### *Support Equipment:*

Device	Manufacturer	Model #	S/N
Router	Linksys	SE3005V2	13P20F1B812909

### General Product Information:

Product Information	Manufacturer-Provided Details
Equipment Type:	Stand-Alone Equipment
Modulation Type(s):	8VSB (ATSC)
Maximum Duty Cycle:	100%
Antenna Type(s) and Gain:	NA. Device is not sold with antenna.
Antenna Connection Type:	External Connector 7/16 DIN
Nominal Input Voltage:	Exciter and Controller, 120Vac 60Hz Power Amplifier, 240Vac 60Hz
Firmware / Software used for Test:	Controller code revision: MCU: V2.1-170217 Exciter code revisions: MCU: V5.2AW_190125, FPGA:V2.2A_I_161107

## General Test Setup

Test Conditions / Notes
<p>The EUT is placed on the test bench. RF out of the exciter is connected to RF-In-A of the controller.</p> <p>Feed Back RF in A is connected to forward power of directional coupler before Band pass filter, Feed Back RF in B is connected to forward power of directional coupler After Band Pass filter.</p> <p>RF-Out-2 port of the controller is connected to the RF in port of the Amplifier.</p> <p>FWD-IN port of the controller is connected the Forward port of the directional coupler at the RF OUT of the Amplifier,</p> <p>REMOTE1 Port of the exciter is connected to ERS-485-A port of the controller. PRS-485-1 port of the controller is connected to the RS485 Port of the amplifier.</p> <p>All Ethernet ports are connected to a support network switch.</p> <p>All other IO ports are unpopulated and only used for troubleshooting.</p> <p>The Output of Band Pass Filter is terminated to the 50ohm load via two high power attenuators.</p> <p>Fundamental Frequency: 195MHz</p> <p>Output power: 600W</p>

## FCC Part 74 Subpart G

### 74.735(b)(1) Power Limitations

#### Test Setup/Conditions

Test Location:	Brea Lab D	Test Engineer:	E. Wong
Test Method:	ANSI C63.26-2015 5.2.4.4	Test Date(s):	5/29/2019
Configuration:	1

## Test Data

Test Location: CKC Laboratories • 100 North Olinda Place • Brea CA 92823 • 714 993-6112  
 Customer: **Anywave Communication Technologies, Inc.**  
 Specification: **47 CFR §74.794(A)(2)(ii) Spurious Emissions**  
 Work Order #: **102510** Date: 5/29/2019  
 Test Type: **Conducted Emissions** Time: 16:14:59  
 Tested By: E. Wong Sequence#: 1  
 Software: EMITest 5.03.12 120/60Hz

### Equipment Tested:

Device	Manufacturer	Model #	S/N
Configuration 1			

### Support Equipment:

Device	Manufacturer	Model #	S/N
Configuration 1			

### Test Conditions / Notes:

The EUT is placed on the test bench. RF out of the exciter is connected to RF-In-A of the controller.

RF-Out-2 port of the controller is connected to the RF in port of the Amplifier.

FWD-IN port of the controller is connected the Forward port of the directional coupler at the RF OUT of the Amplifier,

REMOTE1 Port of the exciter is connected to RES-485-A port of the controller. PRD-485-1 port of the controller is connected to the RS485 Port of the amplifier.

RS45B of exciter, Lan port of Controller, LAN port of the Amplifier are connected to a Router.

The RF OUT of the amplifier is connected to the spectrum analyzer via two high power attenuators. (note the band pass filter is NOT installed for this measurement,)

Recorded measurement is corrected with respect to attenuation of the Band Pass Filter as determined from separate insertion loss measurement.

Fundamental Frequency: 195MHz

**Operations at 100W**

Frequency range of measurement = 9 kHz- 2 GHz.  
 RBW=510kHz, VBW=1MHz  
 Test environment conditions: 25.1°C, Relative Humidity: 47%, Pressure: 98.6kPa

Test Location: CKC Laboratories Inc. • 110 N Olinda Pl • Brea CA 92823 • 714 993-6112  
 Customer: **Anywave Communication Technologies Inc.**  
 Specification: **74.794(a)(2)(ii) Radiated Emissions**  
 Work Order #: **102510** Date: 5/29/2019  
 Test Type: **Maximized Emissions** Time: 09:15:49  
 Tested By: E. Wong Sequence#: 13  
 Software: EMITest 5.03.12

***Equipment Tested:***

Device	Manufacturer	Model #	S/N
Configuration 1			

***Support Equipment:***

Device	Manufacturer	Model #	S/N
Configuration 1			

***Test Conditions / Notes:***

The EUT is placed on the test bench. RF out of the exciter is connected to RF-In-A of the controller. Feed Back RF in A is connected to forward power of directional coupler before Band pass filter, Feed Back RF in B is connected to forward power of directional coupler After Band Pass filter.  
 RF-Out-2 port of the controller is connected to the RF in port of the Amplifier.  
 FWD-IN port of the controller is connected the Forward port of the directional coupler at the RF OUT of the Amplifier,  
 REMOTE1 Port of the exciter is connected to ERS-485-A port of the controller. PRS-485-1 port of the controller is connected to the RS485 Port of the amplifier.  
 All Ethernet ports are connected to a support network switch.  
 All other IO ports are unpopulated and only used for troubleshooting.  
 The Output of Band Pass Filter is terminated to the 50ohm load via two high power attenuators.  
 Fundamental Frequency: 195MHz  
 Output power: 600W  
  
 Frequency range of measurement 9kHz -2000MHz  
  
 9 kH -150 kHz;RBW=200 Hz,VBW=200 Hz;150 kHz-30 MHz;RBW=9 kHz,VBW=9 kHz;30 MHz-1000 MHz;RBW=120 kHz,VBW=120 kHz,1000 MHz-2000 MHz;RBW=1 MHz,VBW=1 MHz.  
  
 Temperature: 22.1°C, Humidity: 43.0%  
 ANSI C63.26-2015  
 Site A  
  
 Modification #1 was in place during testing.  
  
 Note; bandwidth correction per 74.794 (a)(3) is applied to readings below 1GHz.  
 $10 \log (BW_{alternate}/500) = 10 \log (120/500) = 6.2\text{dB}$

### **Parameter Definitions:**

Measurements performed at input voltage  $V_{\text{Nominal}} \pm 15\%$ .

Parameter	Value
$V_{\text{Nominal}}$ :	120 VAC
$V_{\text{Minimum}}$ :	102.00 VAC
$V_{\text{Maximum}}$ :	138.00 VAC

Measurements performed according to manufacturer specification.

Parameter	Value
$T_{\text{Nominal}}$ :	+20C
$T_{\text{Minimum}}$ :	-10C
$T_{\text{Maximum}}$ :	+50C

## Test Data - Voltage and Temperature

## SUPPLEMENTAL INFORMATION

### Measurement Uncertainty

Uncertainty Value	Parameter
4.73 dB	Radiated Emissions
3.34 dB	Mains Conducted Emissions
3.30 dB	Disturbance Power

Uncertainties reported are worst case for all CKC Laboratories' sites and represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of  $k=2$ .

### Emissions Test Details

#### TESTING PARAMETERS

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

#### CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in  $\text{dB}\mu\text{V}/\text{m}$ , the spectrum analyzer reading in  $\text{dB}\mu\text{V}$  was corrected by using the following formula. This reading was then compared to the applicable specification limit. Individual measurements were compared with the displayed limit value in the margin column. The margin was calculated based on subtracting the limit value from the corrected measurement value; a positive margin represents a measurement exceeding the limit, while a negative margin represents a measurement less than the limit.

SAMPLE CALCULATIONS		
	Meter reading	( $\text{dB}\mu\text{V}$ )
+	Antenna Factor	( $\text{dB}/\text{m}$ )
+	Cable Loss	( $\text{dB}$ )
-	Distance Correction	( $\text{dB}$ )
-	Preamplifier Gain	( $\text{dB}$ )
=	Corrected Reading	( $\text{dB}\mu\text{V}/\text{m}$ )

## TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE			
TEST	BEGINNING FREQUENCY	ENDING FREQUENCY	BANDWIDTH SETTING
CONDUCTED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	9 kHz	150 kHz	200 Hz
RADIATED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	30 MHz	1000 MHz	120 kHz
RADIATED EMISSIONS	1000 MHz	>1 GHz	1 MHz

## SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or caret ("^") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

### Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

### Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

### Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point, the measuring device is set into the linear mode and the scan time is reduced.
